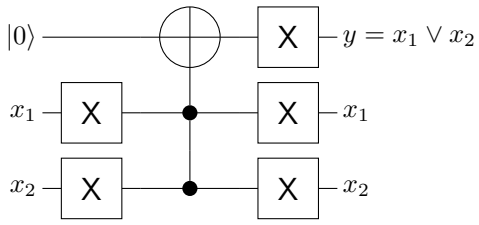
November 15, 2018

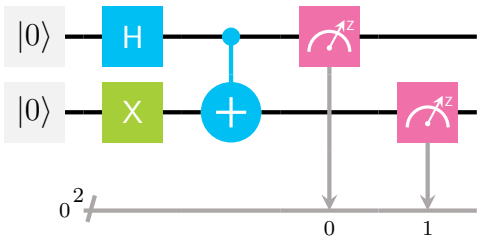
See https://github.com/matthias-wolff/tikz-quantumgates/blob/master/tikz-quantumgates.pdf for the latest version of this document.

Abstract

This package provides macros for drawing quantum gates and circuits with TikZ [1].



```
\documentclass{standalone}
\usepackage{tikz-quantumgates}
\begin{document}
  \centering
  \begin{tikzpicture}
    \node[anchor=east] at (-0.6,2) {$|0\rangle$};
    \node[anchor=east] at (-0.6,1) {$x_1$};
    \node[anchor=east] at (-0.6,0) {$x_2$};
    \qwire{0}{2}\qgateX{0}{1}\qgateX{0}{0}
    \qgateCNX{b}{1}{2}\qgateCNC{bt}{1}{1}\qgateCNC{t}{1}{0}
    \qgateX{2}{2}\qgateX{2}{1}\qgateX{2}{0}
    \node[anchor=west] at (3.2,2) {$y=x_1\vee x_2$};
    \node[anchor=west] at (3.2,1) {$x_1$};
    \node[anchor=west] at (3.2,0) {$x_2$};
  \end{tikzpicture}
\end{document}
```



```
\documentclass{standalone}
\usepackage{tikz-quantumgates}
\begin{document}
  \centering
  \begin{tikzpicture}
    \node[anchor=east] at (0.6,-0.3) {\footnotesize 0};
    \qzero[ibmqx]{0}{2}\qzero[ibmqx]{0}{1}
    \qgateH[ibmqx]{1}{2}\qgateX[ibmqx]{1}{1}\qmeasBh[ibmqx]{2}{1}{0}
    \qgateCNC[ibmqx]{b}{2}{2}\qgateCNX[ibmqx]{t}{2}{1}\qmeasB[ibmqx]{2}{0}
    \qmeasM[ibmqx]{3}{2}\qmeasR[ibmqx]{3}{1}\qmeasMB[ibmqx]{0}{3}{0}
    \qwire[ibmqx]{4}{2}\qmeasM[ibmqx]{4}{1}\qmeasMB[ibmqx]{1}{4}{0}
  \end{tikzpicture}
\end{document}
```

		`\qgateUuu[option]{x}{y}{label}` (not an "official" IBM QX symbol)

1.2 Installation

Download `tikz-quantumgates.sty` from [2] file into your project folder and include the package with `\usepackage{tikz-quantumgates}`.

2 Documentation of Commands

2.1 Wire and State Preparation Symbols

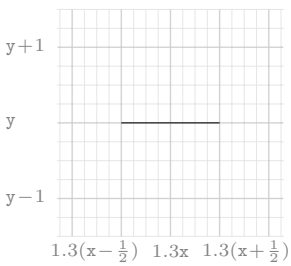
```
\qwire[option]{x}{y}
```

Draws a wire.

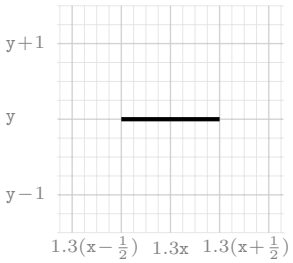
Parameters

`option`	Omit for standard circuit styling or `ibmqx` for IBM Q Experience circuit styling.
`x, y`	Position of symbol in schematic. The actual TikZ coordinates are (`\qgateSx*x, y`).

Examples



```
\begin{tikzpicture}
  \qScalePaper
  \qwire{0}{0}
\end{tikzpicture}
```



```
1 \begin{tikzpicture}
2   \qScalePaper
3   \qwire[ibmqx]{0}{0}
4 \end{tikzpicture}
```

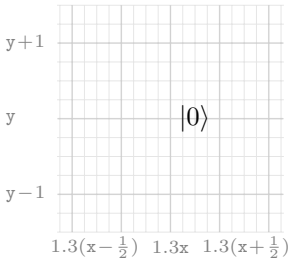
`\qzero[option]{x}{y}`

Draws the zero-state preparator.

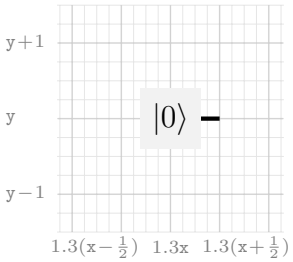
Parameters

`option`	Omit for standard circuit styling or `ibmqx` for IBM Q Experience circuit styling.
`x, y`	Position of symbol in schematic. The actual TikZ coordinates are (`\qgateSx*x`, `y`).

Examples



```
1 \begin{tikzpicture}
2   \qScalePaper
3   \qzero{0}{0}
4 \end{tikzpicture}
```



```
1 \begin{tikzpicture}
2   \qScalePaper
3   \qzero[ibmqx]{0}{0}
4 \end{tikzpicture}
```

2.2 Single-Qubit Gate Symbols

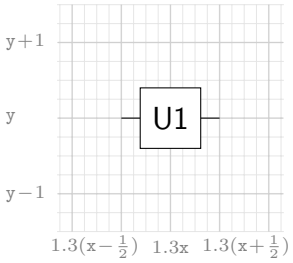
`\qgateU[option]{x}{y}{label}`

Draws a general single-qubit quantum gate.

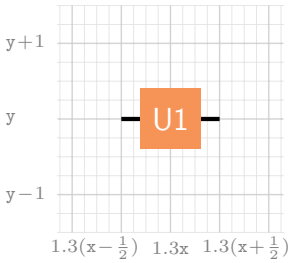
Parameters

`option`	Omit for standard circuit styling or `ibmqxA`,...,`ibmqxH` for IBM Q Experience circuit styling. The last letter of `ibmqx*` defines the color of the gate symbol: A B C D E F G H If `ibmqx` is passed, `ibmqxG` will be used.
`x, y`	Position of symbol in schematic. The actual TikZ coordinates are (`\qgateSx*x`, `y`).
`label`	Gate label.

Examples



```
\begin{tikzpicture}
  \qScalePaper
  \qgateU{0}{0}{U1}
\end{tikzpicture}
```



```
\begin{tikzpicture}
  \qScalePaper
  \qgateU[ibmqxA]{0}{0}{U1}
\end{tikzpicture}
```

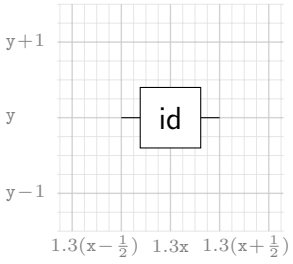
`\qgateID[option]{x}{y}`

Draws the identity gate.

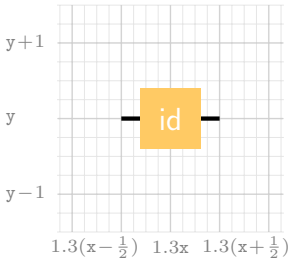
Parameters

`option`	Omit for standard circuit styling or `ibmqx` for IBM Q Experience circuit styling.
`x, y`	Position of symbol in schematic. The actual TikZ coordinates are (`\qgateSx*x, y`).

Examples



```
\begin{tikzpicture}
  \qScalePaper
  \qgateID{0}{0}
\end{tikzpicture}
```



```
\begin{tikzpicture}
  \qScalePaper
  \qgateID[ibmqx]{0}{0}
\end{tikzpicture}
```

Gate Operator

$I \doteq \begin{pmatrix} & \langle 0| & \langle 1| \\ |0\rangle & 1 & 0 \\ |1\rangle & 0 & 1 \end{pmatrix}$

```
$\displaystyle I\doteq\qgateOID $
```

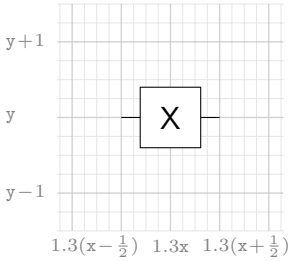
`\qgateX[option]{x}{y}`

Pauli-X gate.

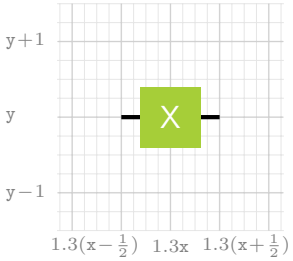
Parameters

`option`	Omit for standard circuit styling or `ibmqx` for IBM Q Experience circuit styling.
`x, y`	Position of symbol in schematic. The actual TikZ coordinates are (`\qgateSx*x, y`).

Examples



```
\begin{tikzpicture}
  \qScalePaper
  \qgateX{0}{0}
\end{tikzpicture}
```



```
\begin{tikzpicture}
  \qScalePaper
  \qgateX[ibmqx]{0}{0}
\end{tikzpicture}
```

Gate Operator

$$X \doteq \left(\begin{array}{c|cc} & \langle 0| & \langle 1| \\ \hline |0\rangle & 0 & 1 \\ |1\rangle & 1 & 0 \end{array}\right)$$

```
$\displaystyle X\doteq\qgateOX $
```

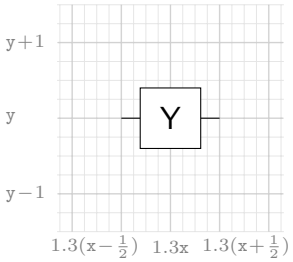
`\qgateY[option]{x}{y}`

Pauli-Y gate.

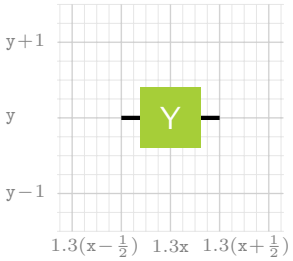
Parameters

`option`	Omit for standard circuit styling or `ibmqx` for IBM Q Experience circuit styling.
`x, y`	Position of symbol in schematic. The actual TikZ coordinates are (`\qgateSx*x, y`).

Examples



```
\begin{tikzpicture}
  \qScalePaper
  \qgateY{0}{0}
\end{tikzpicture}
```



```
\begin{tikzpicture}
  \qScalePaper
  \qgateY[ibmqx]{0}{0}
\end{tikzpicture}
```

Gate Operator

$$Y \doteq \left(\begin{array}{c|cc} & \langle 0| & \langle 1| \\ \hline |0\rangle & 0 & -\mathrm{i} \\ |1\rangle & \mathrm{i} & 0 \end{array}\right)$$

```
$\displaystyle Y\doteq\qgateOY $
```

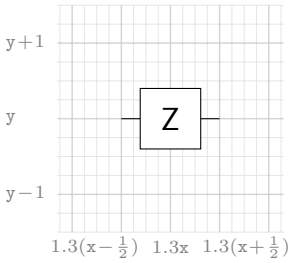
\qgateZ[option]{x}{y}

Pauli-Z gate.

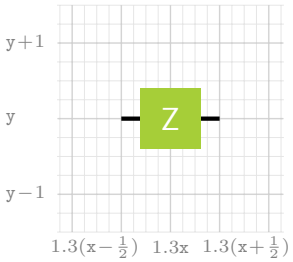
Parameters

`option`	Omit for standard circuit styling or `ibmqx` for IBM Q Experience circuit styling.
`x, y`	Position of symbol in schematic. The actual TikZ coordinates are (\qgateSx*x, y).

Examples



```
\begin{tikzpicture}
  \qScalePaper
  \qgateZ{0}{0}
\end{tikzpicture}
```



```
\begin{tikzpicture}
  \qScalePaper
  \qgateZ[ibmqx]{0}{0}
\end{tikzpicture}
```

Gate Operator

$$Z \doteq \left(\begin{array}{c|cc} & \langle 0| & \langle 1| \\ \hline |0\rangle & 1 & 0 \\ |1\rangle & 0 & -1 \end{array}\right)$$

```
$\displaystyle Z\doteq\qgateOZ $
```

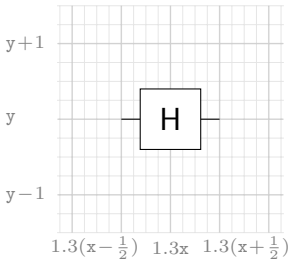
\qgateH[option]{x}{y}

Hadamard gate.

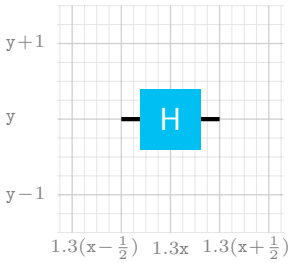
Parameters

`option`	Omit for standard circuit styling or `ibmqx` for IBM Q Experience circuit styling.
`x, y`	Position of symbol in schematic. The actual TikZ coordinates are (\qgateSx*x, y).

Examples



```
\begin{tikzpicture}
  \qScalePaper
  \qgateH{0}{0}
\end{tikzpicture}
```



```
\begin{tikzpicture}
  \qScalePaper
  \qgateH[ibmqx]{0}{0}
\end{tikzpicture}
```

Gate Operator

$$H \doteq \frac{1}{\sqrt{2}} \left(\begin{array}{c|cc} & \langle 0| & \langle 1| \\ \hline |0\rangle & 1 & 1 \\ |1\rangle & 1 & -1 \end{array} \right)$$

```
$\displaystyle H\doteq\qgateOH $
```

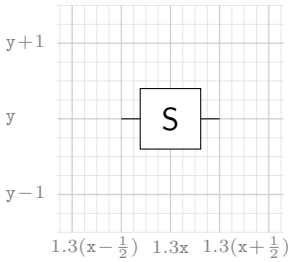
`\qgateS[option]{x}{y}`

S phase gate.

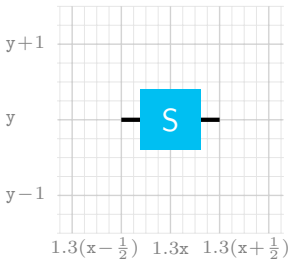
Parameters

`option`	Omit for standard circuit styling or `ibmqx` for IBM Q Experience circuit styling.
`x, y`	Position of symbol in schematic. The actual TikZ coordinates are (`\qgateSx*x`, `y`).

Examples



```
\begin{tikzpicture}
  \qScalePaper
  \qgateS{0}{0}
\end{tikzpicture}
```



```
\begin{tikzpicture}
  \qScalePaper
  \qgateS[ibmqx]{0}{0}
\end{tikzpicture}
```

Gate Operator

$$S = \sqrt{Z} \doteq \frac{1}{\sqrt{2}} \begin{pmatrix} & \langle 0| & \langle 1| \\ |0\rangle & 1 & 0 \\ |1\rangle & 0 & \mathrm{i} \end{pmatrix}$$

```
$\displaystyle S=\sqrt{Z}\doteq\qgateOS $
```

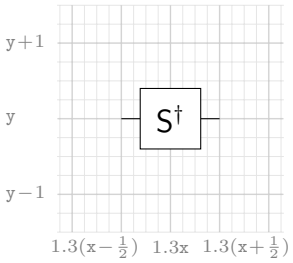
`\qgateSi[option]{x}{y}`

Inverse S phase gate.

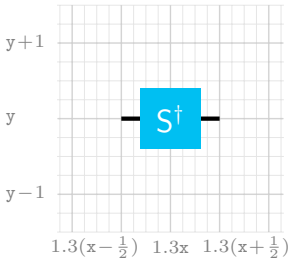
Parameters

`option`	Omit for standard circuit styling or `ibmqx` for IBM Q Experience circuit styling.
`x, y`	Position of symbol in schematic. The actual TikZ coordinates are (`\qgateSx*x, y`).

Examples



```
\begin{tikzpicture}
  \qScalePaper
  \qgateSi{0}{0}
\end{tikzpicture}
```



```
\begin{tikzpicture}
  \qScalePaper
  \qgateSi[ibmqx]{0}{0}
\end{tikzpicture}
```

Gate Operator

$$S^\dagger \doteq \frac{1}{\sqrt{2}} \begin{pmatrix} & \langle 0| & \langle 1| \\ |0\rangle & 1 & 0 \\ |1\rangle & 0 & -\mathrm{i} \end{pmatrix}$$

```
$\displaystyle S^\dagger\doteq\qgateOSi $
```

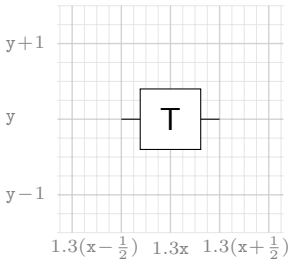
`\qgateT[option]{x}{y}`

T phase gate.

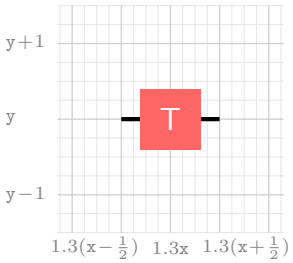
Parameters

`option`	Omit for standard circuit styling or `ibmqx` for IBM Q Experience circuit styling.
`x, y`	Position of symbol in schematic. The actual TikZ coordinates are (`\qgateSx*x, y`).

Examples



```
\begin{tikzpicture}
  \qScalePaper
  \qgateT{0}{0}
\end{tikzpicture}
```



```
\begin{tikzpicture}
  \qScalePaper
  \qgateT[ibmqx]{0}{0}
\end{tikzpicture}
```

Gate Operator

$$T = \sqrt{S} \doteq \frac{1}{\sqrt{2}} \left(\begin{array}{c|cc} & \langle 0| & \langle 1| \\ \hline |0\rangle & 1 & 0 \\ |1\rangle & 0 & \frac{1}{\sqrt{2}}(1+\mathrm{i}) \end{array} \right)$$

```
$\displaystyle T=\sqrt{S}\doteq\qgateOT $
```

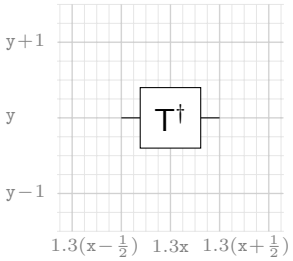
\qgateTi[option]{x}{y}

Inverse T phase gate.

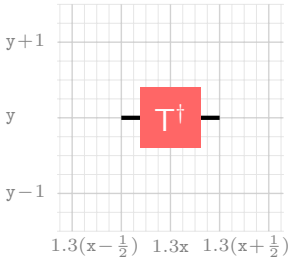
Parameters

`option`	Omit for standard circuit styling or `ibmqx` for IBM Q Experience circuit styling.
`x, y`	Position of symbol in schematic. The actual TikZ coordinates are (`\qgateSx*x, y`).

Examples



```
\begin{tikzpicture}
  \qScalePaper
  \qgateTi{0}{0}
\end{tikzpicture}
```



```
\begin{tikzpicture}
  \qScalePaper
  \qgateTi[ibmqx]{0}{0}
\end{tikzpicture}
```

Gate Operator

$$T^{\dagger} \doteq \frac{1}{\sqrt{2}} \left(\begin{array}{c|cc} & \langle 0| & \langle 1| \\ \hline |0\rangle & 1 & 0 \\ |1\rangle & 0 & \frac{1}{\sqrt{2}}(1-\mathrm{i}) \end{array} \right)$$

```
$\displaystyle T^\dagger\doteq\qgateOTi $
```

2.3 Single-Qubit Physical Gate of IBM Q Experience

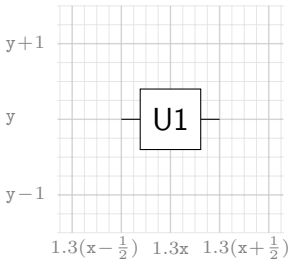
```
\qgateUa[option]{x}{y}
\qgateUa*[option]{x}{y}{sublabel}
```

U1 gate of IBM Q Experience.

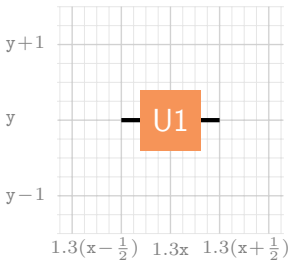
Parameters

`option`	Omit for standard circuit styling or `ibmqx` for IBM Q Experience circuit styling.
`x, y`	Position of symbol in schematic. The actual TikZ coordinates are (`\qgateSx*x, y`).
`sublabel`	Sub-label, e. g. for gate parameters (starred version only)

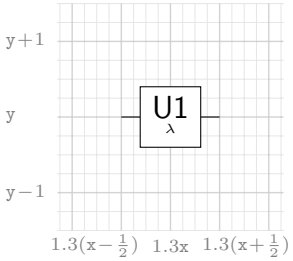
Examples



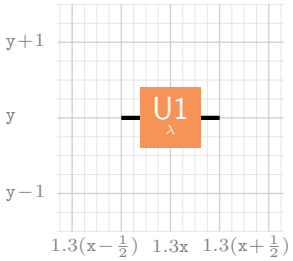
```
\begin{tikzpicture}
  \qScalePaper
  \qgateUa{0}{0}
\end{tikzpicture}
```



```
\begin{tikzpicture}
  \qScalePaper
  \qgateUa[ibmqx]{0}{0}
\end{tikzpicture}
```



```
\begin{tikzpicture}
  \qScalePaper
  \qgateUa*{0}{0}{$\lambda$}
\end{tikzpicture}
```



```
\begin{tikzpicture}
  \qScalePaper
  \qgateUa*[ibmqx]{0}{0}{$\lambda$}
\end{tikzpicture}
```

Gate Operator

$$U1_\lambda \doteq \left(\begin{array}{c|cc} & \langle 0| & \langle 1| \\ \hline |0\rangle & 1 & 0 \\ |1\rangle & 0 & e^{\lambda i} \end{array}\right)$$

```
$\displaystyle U1_{\lambda}\doteq\qgateOUa $
```

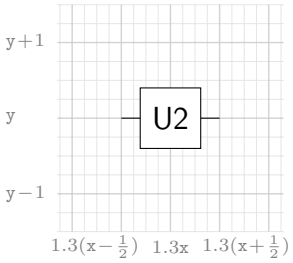
```
\qgateUb[option]{x}{y}
\qgateUb*[option]{x}{y}{sublabel}
```

U2 gate of IBM Q Experience.

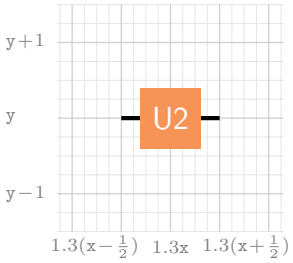
Parameters

`option`	Omit for standard circuit styling or `ibmqx` for IBM Q Experience circuit styling.
`x, y`	Position of symbol in schematic. The actual TikZ coordinates are (`\qgateSx*x, y`).
`sublabel`	Sub-label, e. g. for gate parameters (starred version only)

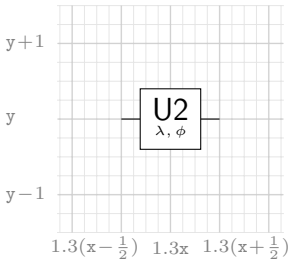
Examples



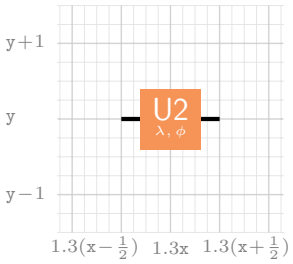
```
\begin{tikzpicture}
  \qScalePaper
  \qgateUb{0}{0}
\end{tikzpicture}
```



```
\begin{tikzpicture}
  \qScalePaper
  \qgateUb[ibmqx]{0}{0}
\end{tikzpicture}
```



```
\begin{tikzpicture}
  \qScalePaper
  \qgateUb*{0}{0}{$\lambda,\phi$}
\end{tikzpicture}
```



```
\begin{tikzpicture}
  \qScalePaper
  \qgateUb*[ibmqx]{0}{0}{$\lambda,\phi$}
\end{tikzpicture}
```

Gate Operator

$$U2_{\lambda,\phi} \doteq \frac{1}{\sqrt{2}} \left(\begin{array}{c|cc} & \langle 0| & \langle 1| \\ \hline |0\rangle & 1 & -\mathrm{e}^{\lambda \mathrm{i}} \\ |1\rangle & \mathrm{e}^{\phi \mathrm{i}} & \mathrm{e}^{(\lambda+\phi)\mathrm{i}} \end{array} \right)$$

```
$\displaystyle U2_{\lambda,\phi}\doteq\qgateOUb $
```

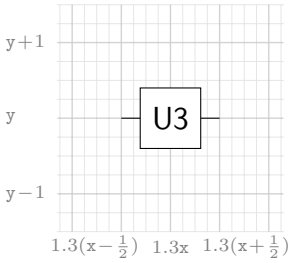
```
\qgateUc[option]{x}{y}
\qgateUc*[option]{x}{y}{sublabel}
```

U3 gate of IBM Q Experience.

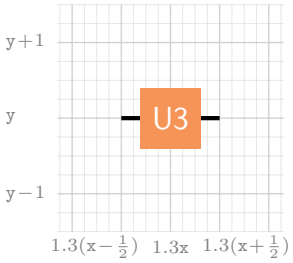
Parameters

`option`	Omit for standard circuit styling or `ibmqx` for IBM Q Experience circuit styling.
`x, y`	Position of symbol in schematic. The actual TikZ coordinates are (`\qgateSx*x, y`).
`sublabel`	Sub-label, e. g. for gate parameters (starred version only)

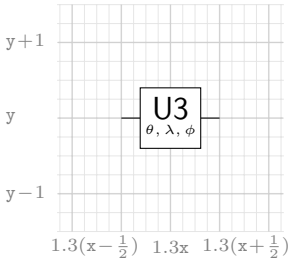
Examples



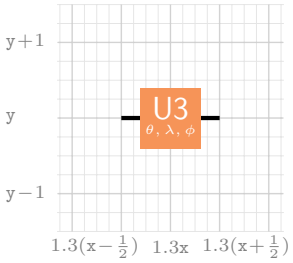
```
\begin{tikzpicture}
  \qScalePaper
  \qgateUc{0}{0}
\end{tikzpicture}
```



```
\begin{tikzpicture}
  \qScalePaper
  \qgateUc[ibmqx]{0}{0}
\end{tikzpicture}
```



```
\begin{tikzpicture}
  \qScalePaper
  \qgateUc*{0}{0}{$\theta,\lambda,\phi$}
\end{tikzpicture}
```



```
\begin{tikzpicture}
  \qScalePaper
  \qgateUc*[ibmqx]{0}{0}{$\theta,\lambda,\phi$}
\end{tikzpicture}
```

Gate Operator

$$U3_{\lambda,\phi,\theta} \doteq \left(\begin{array}{c|cc} & \langle 0| & \langle 1| \\ \hline |0\rangle & \cos(\frac{\theta}{2}) & -\sin(\frac{\theta}{2})\mathrm{e}^{\lambda \mathrm{i}} \\ |1\rangle & \sin(\frac{\theta}{2})\mathrm{e}^{\phi \mathrm{i}} & \cos(\frac{\theta}{2})\mathrm{e}^{(\lambda+\phi)\mathrm{i}} \end{array}\right)$$

```
$\displaystyle U3_{\lambda,\phi,\theta}\doteq\qgateOUc $
```

2.4 Multiple-Qubit Gate Symbols

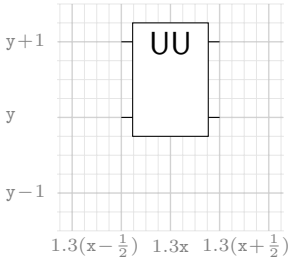
`\qgateUu[option]{x}{y}{label}`

General three-qubit gate.

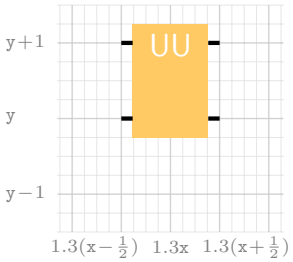
Parameters

`option`	Omit for standard circuit styling or `ibmqxA`,...,`ibmqxH` for IBM Q Experience circuit styling. The last letter of `ibmqx*` defines the color of the gate symbol: A B C D E F G H. If `ibmqx` is passed, `ibmqxG` will be used.
`x, y`	Position of symbol in schematic. The actual TikZ coordinates are (`\qgateSx*x, y`).
`label`	Gate label.

Examples



```
\begin{tikzpicture}
  \qScalePaper
  \qgateUu{0}{0}{UU}
\end{tikzpicture}
```



```
\begin{tikzpicture}
  \qScalePaper
  \qgateUu[ibmqxB]{0}{0}{UU}
\end{tikzpicture}
```

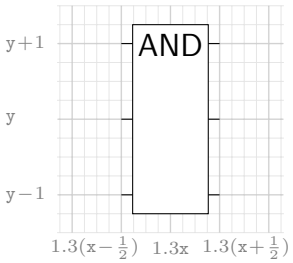
`\qgateUuu[option]{x}{y}{label}`

General three-qubit gate.

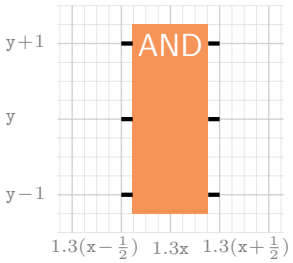
Parameters

`option`	Omit for standard circuit styling or `ibmqxA`,...,`ibmqxH` for IBM Q Experience circuit styling. The last letter of `ibmqx*` defines the color of the gate symbol: A B C D E F G H. If `ibmqx` is passed, `ibmqxG` will be used.
`x, y`	Position of symbol in schematic. The actual TikZ coordinates are (`\qgateSx*x, y`).
`label`	Gate label.

Examples



```
\begin{tikzpicture}
  \qScalePaper
  \qgateUuu{0}{0}{AND}
\end{tikzpicture}
```



```
\begin{tikzpicture}
  \qScalePaper
  \qgateUuu[ibmqxA]{0}{0}{AND}
\end{tikzpicture}
```

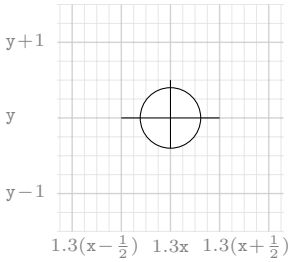
`\qgateCNX[option]{cwires}{x}{y}`

XOR symbol of controlled-NOT gate.

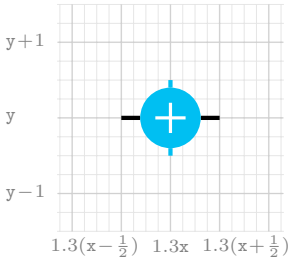
Parameters

`option`	Omit for standard circuit styling or `ibmqx` for IBM Q Experience circuit styling.
`cwires`	Control wires, `t` for top, `b` for bottom, and `tb` for both sides.
`x, y`	Position of symbol in schematic. The actual TikZ coordinates are (`\qgateSx*x, y`).

Examples



```
\begin{tikzpicture}
  \qScalePaper
  \qgateCNX{t}{0}{0}
\end{tikzpicture}
```



```
\begin{tikzpicture}
  \qScalePaper
  \qgateCNX[ibmqx]{tb}{0}{0}
\end{tikzpicture}
```

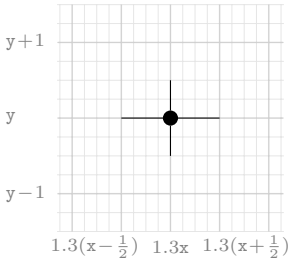
`\qgateCNC[option]{cwires}{x}{y}`

Control qubit symbol of controlled-NOT gate.

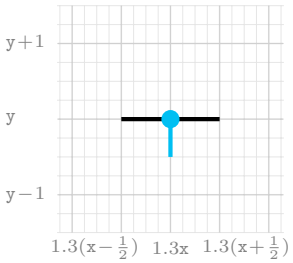
Parameters

`option`	Omit for standard circuit styling or `ibmqx` for IBM Q Experience circuit styling.
`cwires`	Control wires, `t` for top, `b` for bottom, and `tb` for both sides.
`x, y`	Position of symbol in schematic. The actual TikZ coordinates are (`\qgateSx*x, y`).

Examples



```
\begin{tikzpicture}
  \qScalePaper
  \qgateCNC{bt}{0}{0}
\end{tikzpicture}
```



```
\begin{tikzpicture}
  \qScalePaper
  \qgateCNC[ibmqx]{b}{0}{0}
\end{tikzpicture}
```

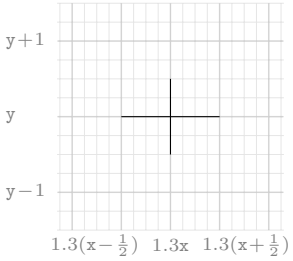
`\qgateCNR[option]{x}{y}`

Run-through qubit symbol of controlled-NOT gate.

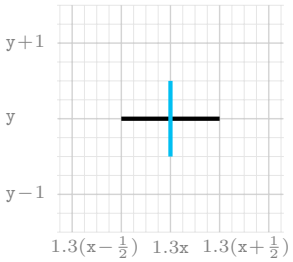
Parameters

`option`	Omit for standard circuit styling or `ibmqx` for IBM Q Experience circuit styling.
`x, y`	Position of symbol in schematic. The actual TikZ coordinates are (`\qgateSx*x, y`).

Examples



```
\begin{tikzpicture}
  \qScalePaper
  \qgateCNR{0}{0}
\end{tikzpicture}
```



```
\begin{tikzpicture}
  \qScalePaper
  \qgateCNR[ibmqx]{0}{0}
\end{tikzpicture}
```

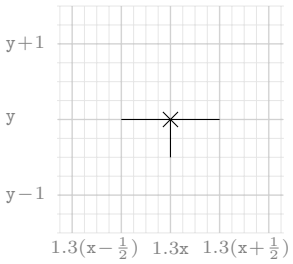
`\qgateSWt[option]{x}{y}`

Top qubit of a SWAP gate.

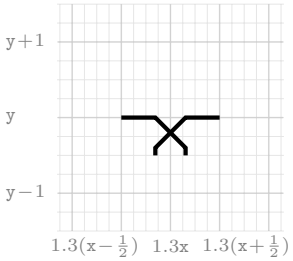
Parameters

`option`	Omit for standard circuit styling or `ibmqx` for IBM Q Experience circuit styling.
`x, y`	Position of symbol in schematic. The actual TikZ coordinates are (`\qgateSx*x`, `y`).

Examples



```
\begin{tikzpicture}
  \qScalePaper
  \qgateSWt{0}{0}
\end{tikzpicture}
```



```
\begin{tikzpicture}
  \qScalePaper
  \qgateSWt[ibmqx]{0}{0}
\end{tikzpicture}
```

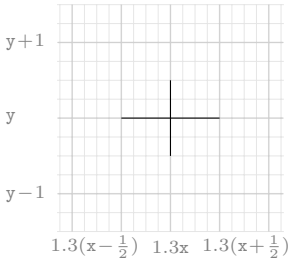
`\qgateSWR[option]{x}{y}`

Run-through qubit of a SWAP gate.

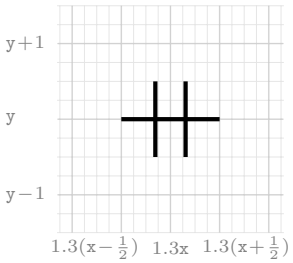
Parameters

`option`	Omit for standard circuit styling or `ibmqx` for IBM Q Experience circuit styling.
`x, y`	Position of symbol in schematic. The actual TikZ coordinates are (`\qgateSx*x`, `y`).

Examples



```
\begin{tikzpicture}
  \qScalePaper
  \qgateSWR{0}{0}
\end{tikzpicture}
```



```
\begin{tikzpicture}
  \qScalePaper
  \qgateSWR[ibmqx]{0}{0}
\end{tikzpicture}
```

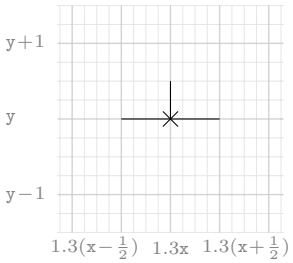
`\qgateSWb[option]{x}{y}`

Bottom qubit of a SWAP gate.

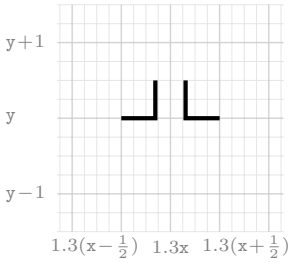
Parameters

`option`	Omit for standard circuit styling or `ibmqx` for IBM Q Experience circuit styling.
`x, y`	Position of symbol in schematic. The actual TikZ coordinates are (`\qgateSx*x, y`).

Examples



```
\begin{tikzpicture}
  \qScalePaper
  \qgateSWb{0}{0}
\end{tikzpicture}
```



```
\begin{tikzpicture}
  \qScalePaper
  \qgateSWb[ibmqx]{0}{0}
\end{tikzpicture}
```

2.5 Measurement Symbols

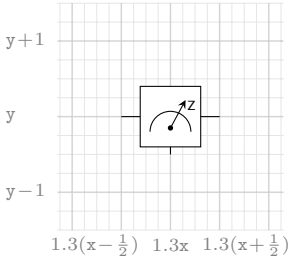
```
\qmeasM[option]{x}{y}
\qmeasM*[option]{x}{y}{axis}{wires}
```

Measurement symbol.

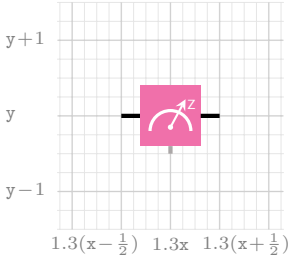
Parameters

`option`	Omit for standard circuit styling or `ibmqx` for IBM Q Experience circuit styling.
`x, y`	Position of symbol in schematic. The actual TikZ coordinates are (`\qgateSx*x, y`).
`axis`	Axis of measurement: X, Y, or Z (starred version only).
`wires`	Wires, `b` for bottom, `r` for right, and `br` for both (starred version only).

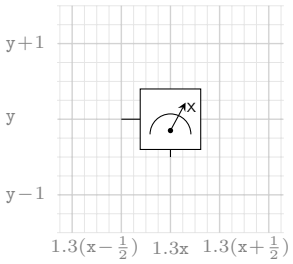
Examples



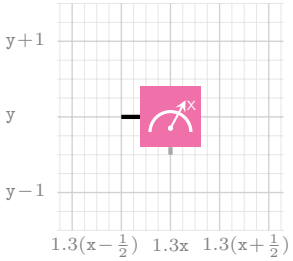
```
\begin{tikzpicture}
  \qScalePaper
  \qmeasM{0}{0}
\end{tikzpicture}
```



```
\begin{tikzpicture}
  \qScalePaper
  \qmeasM[ibmqx]{0}{0}
\end{tikzpicture}
```



```
\begin{tikzpicture}
  \qScalePaper
  \qmeasM*{0}{0}{X}{b}
\end{tikzpicture}
```



```
\begin{tikzpicture}
  \qScalePaper
  \qmeasM*[ibmqx]{0}{0}{X}{b}
\end{tikzpicture}
```

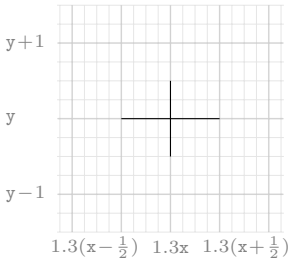
\qmeaR[option]{x}{y}

Measurement run-through qubit symbol.

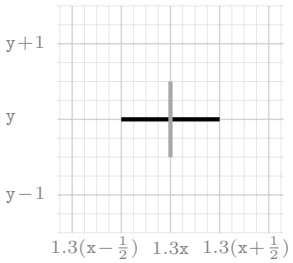
Parameters

`option`	Omit for standard circuit styling or `ibmqx` for IBM Q Experience circuit styling.
`x, y`	Position of symbol in schematic. The actual TikZ coordinates are (`\qgateSx*x, y`).

Examples



```
\begin{tikzpicture}
  \qScalePaper
  \qmeasR{0}{0}
\end{tikzpicture}
```



```
\begin{tikzpicture}
  \qScalePaper
  \qmeasR[ibmqx]{0}{0}
\end{tikzpicture}
```

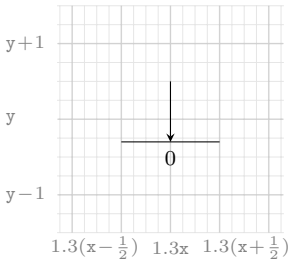
\qmeasMB[option]{b}{x}{y}

Measurement-joins-bus symbol.

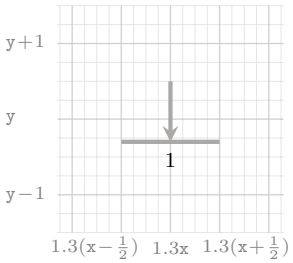
Parameters

`option`	Omit for standard circuit styling or `ibmqx` for IBM Q Experience circuit styling.
`b`	Bit identifier on conventional bits bus.
`x, y`	Position of symbol in schematic. The actual TikZ coordinates are (`\qgateSx*x, y`).

Examples



```
\begin{tikzpicture}
  \qScalePaper
  \qmeasMB{0}{0}{0}
\end{tikzpicture}
```



```
\begin{tikzpicture}
  \qScalePaper
  \qmeasMB[ibmqx]{1}{0}{0}
\end{tikzpicture}
```

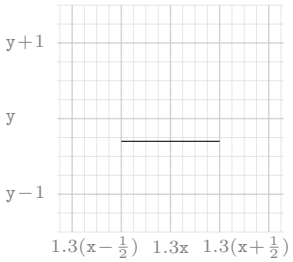
`\qmeaB[option]{x}{y}`

Measurement bus symbol.

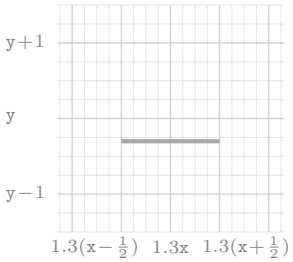
Parameters

`option`	Omit for standard circuit styling or `ibmqx` for IBM Q Experience circuit styling.
`x, y`	Position of symbol in schematic. The actual TikZ coordinates are (`\qgateSx*x, y`).

Examples



```
\begin{tikzpicture}
  \qScalePaper
  \qmeasB{0}{0}
\end{tikzpicture}
```



```
\begin{tikzpicture}
  \qScalePaper
  \qmeasB[ibmqx]{0}{0}
\end{tikzpicture}
```

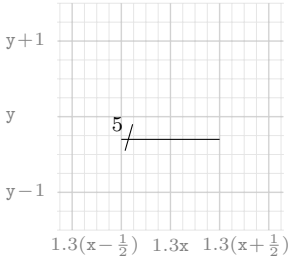
`\qmeaBh[option]{b}{x}{y}`

Measurement bus header symbol.

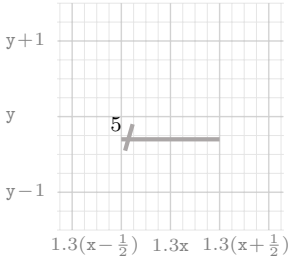
Parameters

`option`	Omit for standard circuit styling or `ibmqx` for IBM Q Experience circuit styling.
`x, y`	Position of symbol in schematic. The actual TikZ coordinates are (`\qgateSx*x, y`).

Examples



```
\begin{tikzpicture}
  \qScalePaper
  \qmeasBh{5}{0}{0}
\end{tikzpicture}
```



```
\begin{tikzpicture}
  \qScalePaper
  \qmeasBh[ibmqx]{5}{0}{0}
\end{tikzpicture}
```

2.6 Further Gate Operators

CNOT Gate Operator

$$CNOT \doteq \left(\begin{array}{c|cccc} & \langle 00| & \langle 01| & \langle 10| & \langle 11| \\ \hline |00\rangle & 1 & 0 & 0 & 0 \\ |01\rangle & 0 & 1 & 0 & 0 \\ |10\rangle & 0 & 0 & 0 & 1 \\ |11\rangle & 0 & 0 & 1 & 0 \end{array}\right)$$

```
$\displaystyle CNOT\doteq\qgateOCNOT $
```

Toffoli (CCNOT) Gate Operator

$$CCNOT \doteq \left(\begin{array}{c|cccccccc} & \langle 000| & \langle 001| & \langle 010| & \langle 011| & \langle 100| & \langle 101| & \langle 110| & \langle 111| \\ \hline |000\rangle & 1 & 0 & 0 & 0 & 0 & 0 & 0 & 0 \\ |001\rangle & 0 & 1 & 0 & 0 & 0 & 0 & 0 & 0 \\ |010\rangle & 0 & 0 & 1 & 0 & 0 & 0 & 0 & 0 \\ |101\rangle & 0 & 0 & 0 & 1 & 0 & 0 & 0 & 0 \\ |100\rangle & 0 & 0 & 0 & 0 & 1 & 0 & 0 & 0 \\ |101\rangle & 0 & 0 & 0 & 0 & 0 & 1 & 0 & 0 \\ |110\rangle & 0 & 0 & 0 & 0 & 0 & 0 & 0 & 1 \\ |111\rangle & 0 & 0 & 0 & 0 & 0 & 0 & 1 & 0 \end{array}\right)$$

```
$\displaystyle CCNOT\doteq\qgateOCCNOT $
```

2.7 Auxiliary Commands

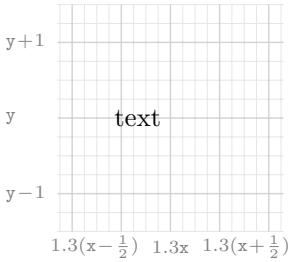
```
\qnode[style]{x}{y}{label}
```

TikZ node in schematics coordinates.

Parameters

`style`	TikZ node style.
`x, y`	Position of symbol in schematic. The actual TikZ coordinates are (`\qgateSx*x`, `y`).
`label`	Node label.

Examples



```
\begin{tikzpicture}
  \qScalePaper
  \qnode[anchor=east]{0}{0}{text}
\end{tikzpicture}
```
